

A Full Day Of Fertility Testing Bulls In Northern Arizona!

Breeding Soundness Exams are an important component of a herd health plan on any beef facility. Our team regularly tests large numbers of bulls and are able to identify low fertility bulls that would cost this producer many valuable calves this coming season. This ranch will now have a fully functioning bull battery and the calf crop will show shortly!

Call us today to have your bulls scheduled for their own breeding soundness exam and make sure they're ready for the upcoming breeding season.

Contact us with any questions about fertility testing for any of your animals!
